4 | Conclusion

In this audit, we thoroughly analyzed the design and implementation of the Golff Protocol. The audited system presents a unique addition to current DeFi offerings in maximizing yields for users. Developed on top of the original YFI protocol, Golff has been equipped with additional home-made strategies that work with a number of yield-generating pools. The current code base is clearly organized and those identified issues are promptly confirmed and fixed. The main concern, however, is related to the current privilege management that is not under the control of a community-based governance.

As a final precaution, we need to emphasize that smart contracts as a whole are still in an early, but exciting stage of development. To improve this report, we greatly appreciate any constructive feedbacks or suggestions, on our methodology, audit findings, or potential gaps in scope/coverage.
